

# STATEMENT

## tesa® 51865

tesa is declaring that the used raw materials are listed in:

- CFR 21 section 175.105.

Special notice:

**tesa® tapes can be used for indirect food contact only!!**

The implementation of the application is the responsibility of the user, who needs to make sure that no transfer of adhesive ingredients to food, drugs or other items that come into direct contact takes place. The migration behavior of adhesive constituents can potentially vary, and may - among others - depend on the conditions of application. Moreover, the barrier function of a separation layer (for example, a primary package or a constructive component), which should prevent the penetration of adhesive components in the contents or the direct contact with sensitive objects, can be impaired. All these (potential) influencing factors should be considered and - when in doubt - investigated by a specialized institution.

Since the a.m. tesa tapes are technical products, which are not produced specifically for the food industry, the production process is also not subject to the provisions of the LFGB (German Food and Feed Code). This means that the required GMP conditions (Good Manufacturing Process) do not apply to the manufacture.
